

F4603N Promotional Sale

\$14,995
SPECIAL PRICE
(Teach pendant
included)

For a limited time Fisnar® is offering the promotion of our F4603N Advance Series 3-Axis Benchtop Robot for a discounted price of \$14,995.00. The F4603N is designed to ensure precise fluid placement and positioning. When configured with a syringe, cartridge, or valve system, a high level of accuracy and repeatability is achieved. Specifically built for fluid dispensing processes, the F4603N proprietary robot software is user friendly and enables the creation of complex dispensing routines (dots, lines, circles, arcs, and fills) that can be set up and operational in just minutes using the teach pendant.

The proprietary windows programming software allows for DXF files to be imported into the software and have dispense lines or dots quickly created from the imported CAD data. This feature dramatically reduces programming time for complex dispense patterns or when there is a high number of dispense positions.

The F4603N Advance can be supplied individually or as a complete stand-alone machine system by integrating into a safety enclosure.
